EXP 8

Consider a Travel Planning Website. Develop a JavaScript program that will validate the controls in the forms you have created for the application. State the assumptions you make (business logic you are taking into consideration).

AIM:

To develop a Travel Planning Website that validates user inputs using JavaScript on the client side and accesses a database using Servlet/JSP for storing and processing travel registration and booking details.

ALGORITHM:

Start the application.

Display the travel registration/booking form to the user.

Accept user inputs such as name, email, password, phone number, destination, and travel date.

Perform client-side validation using JavaScript:

Check for empty fields.

Validate email format.

Validate password strength.

Validate phone number length and format.

Validate travel date.

If validation fails:

Display appropriate error messages.
Prevent form submission.
If validation is successful:
Submit the form to the server (Servlet/JSP).
On the server side:
Receive the form data.
Perform server-side validation.
Connect to the database.
Store user travel details in the database.
Generate confirmation message for successful booking.
Stop the application.

STEPS:

1. Design the registration form with fields like name, email, password, phone number, exam selection, and date.
2. Implement JavaScript validation for all form controls.
3. Ensure proper error messages are displayed for invalid inputs.
4. Configure Servlet/JSP to handle form submission.
5. Establish database connectivity using JDBC.
6. Create a database table for storing registration details.
7. Insert validated data into the database.
8. Retrieve and display confirmation details to the user.
9. Handle duplicate registrations and invalid data cases.
10. Test the application for different input scenarios.

ASSUMPTIONS (BUSINESS LOGIC)

1. Each user must register with a unique email ID.
2. Password must meet minimum security requirements (e.g., length, characters).
3. Phone number must be exactly 10 digits.
4. All fields are mandatory.
5. A user can register for only one exam at a time.
6. Exam date must be a valid future date.
7. Database stores all user and exam details securely.
8. Server-side validation is mandatory even after client-side validation.
9. Duplicate registrations are not allowed.
10. Proper error handling and user feedback are provided.

Program:

```
import java.io.*;
import javax.servlet.*;
import javax.servlet.http.*;
import javax.servlet.annotation.WebServlet;
import java.sql.*;

@WebServlet("/TravelBookingServlet")
public class TravelBookingServlet extends HttpServlet {

    protected void doPost(HttpServletRequest request, HttpServletResponse response)
            throws ServletException, IOException {

        String name = request.getParameter("name");
        String email = request.getParameter("email");
        String phone = request.getParameter("phone");
        String destination = request.getParameter("destination");
        String date = request.getParameter("date");

        response.setContentType("text/html");

        try {
            Class.forName("com.mysql.cj.jdbc.Driver");

            Connection con = DriverManager.getConnection(
                "jdbc:mysql://localhost:3306/travel_db",
                "root", "root"
            );

            PreparedStatement ps = con.prepareStatement(
                "INSERT INTO bookings(name, email, phone, destination, date) VALUES (?, ?, ?, ?,
?)"
            );

            ps.setString(1, name);
            ps.setString(2, email);
            ps.setString(3, phone);
```

```
            ps.setString(4, destination);
            ps.setString(5, date);

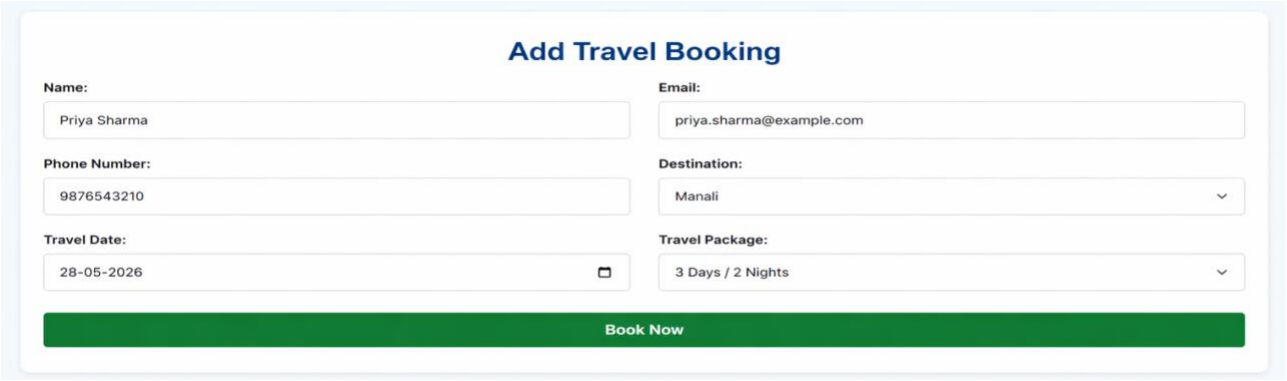
            int i = ps.executeUpdate();

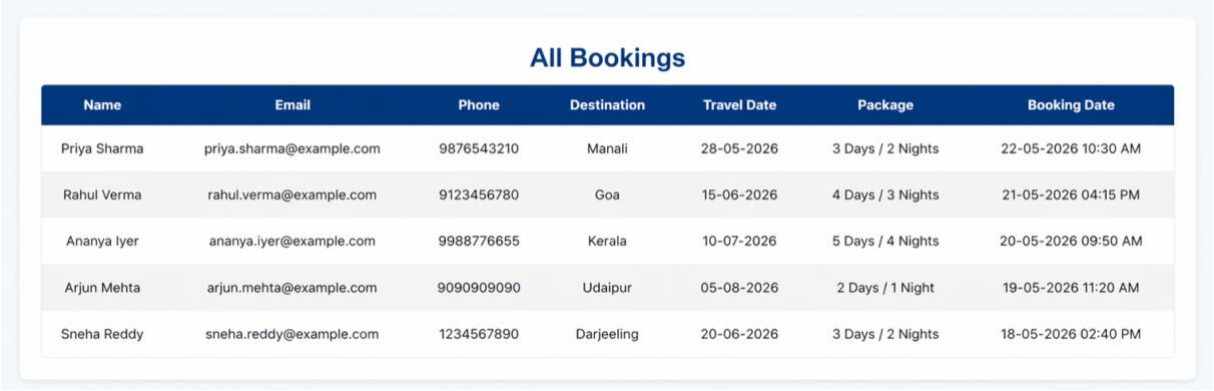
            if (i > 0) {
                response.getWriter().println("<h2>Booking Successful!</h2>");
            } else {
                response.getWriter().println("Booking Failed");
            }

            ps.close();
            con.close();

        } catch (Exception e) {
            response.getWriter().println("Error: " + e.getMessage());
        }
    }
}
```

OUTPUT:





All Bookings

Name	Email	Phone	Destination	Travel Date	Package	Booking Date
Priya Sharma	priya.sharma@example.com	9876543210	Manali	28-05-2026	3 Days / 2 Nights	22-05-2026 10:30 AM
Rahul Verma	rahul.verma@example.com	9123456780	Goa	15-06-2026	4 Days / 3 Nights	21-05-2026 04:15 PM
Ananya Iyer	ananya.iyer@example.com	9988776655	Kerala	10-07-2026	5 Days / 4 Nights	20-05-2026 09:50 AM
Arjun Mehta	arjun.mehta@example.com	9090909090	Udaipur	05-08-2026	2 Days / 1 Night	19-05-2026 11:20 AM
Sneha Reddy	sneha.reddy@example.com	1234567890	Darjeeling	20-06-2026	3 Days / 2 Nights	18-05-2026 02:40 PM

RESULT

The Online Exam Registration Portal successfully validates user inputs using JavaScript and stores the validated data in a database using Servlet/JSP, ensuring accurate and secure registration.
